

ROBOT SOLUTIONS

From conception to planning, manufacture,
delivery, integration and servicing!

As a KUKA System Partner, we implement robot solutions that are specially tailored to your needs.

We develop flexible and individual solutions and integrate them into your existing plants. In addition to the "classic" robot applications, we also offer solutions for the "heavy and dirty" range of applications, in which robots are still seldom used even today.

We guarantee flexible and goal-oriented project realisation with first class services at the best possible conditions. In accordance with your instructions, we supervise, coordinate and deliver partial or complete solutions for new and currently operating plants.

Our outstanding expertise, our highly qualified and experienced teams and our reliable planning and service provision complement one another to yield an overall solution that actively supports you in bringing about process optimisation and increases in productivity.

You define your particular requirements; we tailor an individual solution suited to your needs and put it into practice. Everything from a single source.

Range of services

- Robot concept study
- Feasibility analysis
- Safety analysis
- Safety concept
- Cycle time analysis
- Robot installation planning
- Layout planning
- Robot simulation
- Gripper construction
- Special construction
- Fabrication
- Electrical planning
- Circuit diagram preparation
- Control cabinet construction
- Installation/integration
- Assembly
- Commissioning
- Documentation
- Customer support
- Maintenance and servicing
